

# **\$Radar Utility Token Whitepaper**

## **1. Introduction**

\$Radar token is the backbone of an advanced trading tool developed for DeFi traders, aiming to

provide precise strategic buy signals for long term portfolio growth.

Our Telegram Bot is built from scratch with a unique focus: consistency. The goal is to give users an edge over other bots on the market by identifying prime entry points and ensuring better accuracy for profitable trades.

Veteran traders first and developers second, we've built this system, designed to provide significant utility to the broader DeFi community, focused on both simplifying and enhancing the personal trading experience.

## **2. Target Audience**

Our primary target audience are those that trade lower to mid cap tokens and traders of all experience levels. The Radar Token (\$Radar) and the accompanying bot are tools developed to provide timely, precise buy signals based on our extensive trading experience and back testing. We

are confident that the bot will appeal to those seeking to improve their trading outcomes by receiving reliable entry points, educational support, and consistent updates.

## **3. Product Overview**

The key product of this ecosystem is our Telegram Signal Bot, a signal service providing traders with instant insights into potential buy zones.

Unlike traditional bots that flood users with numerous signals, \$Radar takes a different approach by focusing on quality over quantity. Our signals are built upon comprehensive market analysis, helping users spot the most advantageous entry points.

#### **4. Token Overview**

Token Name: Radar

Ticker: \$Radar

Max Supply: 100 million tokens

Initial Liquidity Pool: 2 ETH

Tax: 5% on buys/sells

The \$Radar token serves as a utility within our ecosystem, providing users with access to various tiers of the Telegram bot and other exclusive features.

#### **5. Tokenomics and Distribution**

To ensure control over the majority of the supply at launch, we will execute a bundle snipe, securing approximately 66% of the total supply. For full transparency these tokens will not be sold on the open market; rather, they will be distributed for access to lower-tier bot features with time locks.

##### **Token Distribution:**

##### **Tier 1 0.35% Supply**

Full access to all bot features, purchased through Uniswap. Includes exclusive whale group membership and live weekly trading sessions.

##### **Tier 2: 0.2% Supply**

Purchased through a registration bot from the sniped supply, with a 15-day lock. Excludes exclusive whale group access.

##### **Tier 3 0.1% Supply**

Purchased through the registration bot with a 30-day lock, no whale group access.

Tokens sold Over-The-Counter (OTC) from the sniped supply will be used to offer lower tier access, encouraging long-term token holding.

## **6. Presale Details**

We successfully completed a presale, raising 10 ETH within a matter of days. This presale event ensures that early adopters have access to the service at launch and encourages them to hold their tokens to maintain bot access.

Contribution Limits:

Minimum: 0.1 ETH (0.1% supply)

Maximum: 0.25 ETH (0.25% supply)

Presale contributors at the maximum allocation automatically qualify for Tier 1 access, provided they hold their tokens.

## **7. Use of Tax (5% Buy/Sell)**

The 5% tax on buy and sell transactions will be reinvested into the project to support its long-term growth. The funds will be allocated for:

- Ongoing Development: Continued updates and improvements to the bot and related tools.
- Server Costs: Ensuring that the system runs smoothly and efficiently for users.
  
- Marketing: Promoting the bot and growing the community to attract more users and increase \$Radar demand.
  
- Team Compensation: Ensuring the developers, community managers, and support team are rewarded for their efforts.

## **8. Community and Support**

We are committed to building a strong and knowledgeable community of traders. To this end, we will be setting up a dedicated support channel, where users can access tips and advice on how to best utilize the bot's signals.

## **9. Key Community Features:**

Educational Resources: Guides and content aimed at helping users maximize their gains.

1-on-1 Support: Personalized assistance for users seeking more tailored guidance on bot utilization.

Future Features: As the bot evolves, so will our support network, ensuring that users always have the help they need to stay ahead of the market.

## **10. Roadmap**

Phase 1:

- Complete launch of the \$Radar token.
- Full deployment of the Telegram Buy Signal Bot to all tiers.

Phase 2:

- Launch of the "degen" version of the bot, available to Tier 1 members.
- Initiate development of the wallet tracker feature with real-time alerts.

Phase 3:

- Expansion of partnerships and KOLs to further promote \$Radar.
- Continue product improvements and ecosystem growth based on user feedback and market trends.

## **Risk Considerations**

We are not financial advisors, and users are responsible for their own trading decisions. The bot is designed to provide signals based on market conditions, but individual risk tolerance and preferences must be factored into all trading strategies.

The volatile nature of cryptocurrency markets means there is always inherent risk in any trade, and our goal is to equip with better information not guaranteed profits

## **Conclusion**

\$Radar is positioned to be a valuable tool in any DeFi trader's arsenal. We are excited to continue developing the project and creating a robust, community-driven ecosystem around the token.
